

Supplementary Figure 4: Confirmation of protein expression in Sendai virus reprogrammed cells **a)** Sendai negative control as confirmed through PCR for SeV backbone and the three reprogramming cassettes (21409-c550 passage 12). **b)** Sendai positive control collected at passage 3 post reprogramming and confirmed positive at passage 20 through PCR (17626-c5101) **c)** Clone positive for the SeV backbone, but negative for reprogramming cassettes by PCR (8175-c501 passage 10) **d)** Clone positive for both SeV backbone and three reprogramming cassettes by PCR at passage 24 (5765-c508) All samples were immuno-stained with OCT4. Scale bars are 100µm.
